<b>Office Action Summary</b>	<b>Application No.</b> 10/576,854	<b>Applicant(s)</b> ARAKI ET AL.	
	<b>Examiner</b> Mary Lynn F. Theisen	<b>Art Unit</b> 1791	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2001-49261.

3. The reference discloses a recycling method for plastic by compression (using an extruder, Fig. 4) shaping waste plastic at a temperature between 100-160°C, obtaining a plastic granular material having an apparent density of 0.4-0.95 kg/l. The plastic granular material is mixed with coal in a mass ratio of 5% or less for carbonization in a coke oven. The reference states that compression shaping of the waste plastic can be done at a temperature exceeding 160°C, however, harmful gas will be generated and special equipment to manage this will be required.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 1791

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2001-49261 in view of Uematsu et al.

7. JP 2001-49261 is described above. JP 2001-49261 does not mention bringing the gas produced at time of compression into contact with water or ammonia. Uematsu et al discloses a process that includes loading waste plastic into a thermal decomposition furnace without prior removal of the chlorine components and contacting the thermally decomposed gas containing chlorine-based gas with ammonia water (col 4, lines 4-8). Since JP 2001-49261 disclosed that heating of the waste plastic over 160°C will generate harmful gas, which would require the use of special equipment. It would have been obvious to one of ordinary skill in the art to contact the gas produced at the time of compression with an ammonia solution as evidenced by Uematsu et al.
